INVESTMENT POLICY

The subfund LUX-PORTFOLIO GROWTH invests its assets in high-capitalization equities, as well as in equities with medium capitalization, preferably quoted on the world's main stock exchanges, particularly in OECD countries. On the other hand, LUX-PORTFOLIO GROWTH invests in bonds from high-quality issuers in a currency of an OECD country. Due to a slightly greater average weighting of the equity part of the portfolio (about 60%) compared to LUX-PORTFOLIO BALANCED, LUX-PORTFOLIO GROWTH favours a more dynamic investment strategy.

The indicated historical performance levels are not a guarantee of similar growth in value in the future. Losses of value cannot be ruled out, and Spuerkeess may not be held liable for them. The actuarial yield represents the yield obtained when a bond portfolio is held to maturity.

The level of risk is determined on the basis of the historical performance of the last five years and should not be considered a reliable indicator of the future risk profile of the compartment. It represents the risk of fluctuations in the net asset value per share and may change over time. Level 1 represents the lowest risk, and level 7 represents the highest risk. The higher the risk, the longer the recommended investment period. For details on the risks involved, please consult the KIID.
